

E3-Modelling is a knowledge-intensive company that provides consulting services based on large-scale empirical modelling of the economy-energy-environment nexus.

The company develops and operates a suite of models, including PRIMES and GEM-E3, two renowned modelling tools used extensively in the preparation of major impact assessment studies and scenario building of the European Commission.

For the past 30 years, **E3-Modelling** has been delivering cutting-edge research, capacity building and hands-on consulting services to governments, the private sector and international organisations on the design and impact analysis of transition pathways towards low- and net-zero emissions in the fields of energy, climate, and transport.

Furthermore, the company is at the forefront of macro-economic research, modelling the various interdependencies of the economic system with the energy and environment focusing on how climate and energy policies affect economic growth, sectorial growth, and employment at European and Global levels.

The models are periodically peer-reviewed and key model developments are published in top-ranked scientific journals.

The management of **E3-Modelling** is committed to adopting and maintain a quality management system according to the international standard ISO 9001:2015 as a means to improving its overall performance and reaching its objectives, as well as to provide a sound basis for sustainable development initiatives. We confirm that employees are well-informed and engaged in implementing the quality management system, and the required resources to this end are available. We are all committed to satisfying applicable requirements, and any requirement related to customer satisfaction and quality of project deliverables.

This Quality Policy is reviewed to remain in line with the context and the strategic direction of the organization.
